SWIPE

Protein basics

0.83 g/kg

of protein per kg of body weight a day, for healthy adults

At 60 kg: about 50 g a day

Spread it across meals

Source: ICMR-NIN, Nutrient Requirements for Indians, 2020 (RDA, healthy adults). General information only, not medical advice. Needs differ in pregnancy, older age, kidney disease and heavy training.

01

Start with your *weight*.

Multiply your body weight in kg by **0.83** to get your daily protein in grams.

WORKED EXAMPLE

60 kg × 0.83 ≈ *50 g* a day

02

Spread it across *meals*.

Aim for a protein food at breakfast, lunch and dinner rather than one large serving.

Chana: an everyday protein source

03

Mix your *sources*.

Combining cereals with pulses, like dal with rice or roti, improves protein quality.

- Dal and pulses
- Curd and paneer
- Eggs
- Soya
- Peanuts and seeds
- Fish and chicken

Save this for your next *meal plan*.
